

Pirate anything Today

/Intro Internet Piracy Zine/
ZeizZine

Agenda

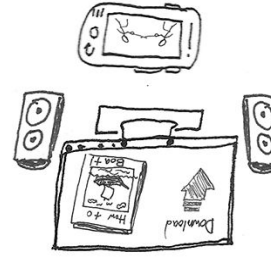

1. Pirate Today
2. What to Pirate
3. FMHY & Community
4. AdBlockers & VPNs
5. Pirating Devices
6. Help setting up devices
- Phone Tools --Back Cover

Pirate Today

I encourage you to start small and learn to pirate by pirating what you want. Whether its re-visiting your favorite piece of media or something new you have been meaning to get.

What to pirate

Cable TV
Streaming
Games
Courses
Lectures
Books
Movies
Live events
Audiobooks
Textbooks

To keep up to date with the best piracy websites there are two methods I recommend:

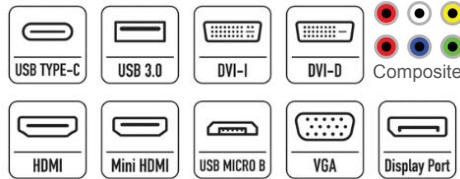

1. Finding pirating communities; websites get taken down but communities stay. Try reddit, discord or telegram
2. FreeMediaHackYeah! (<http://fmhy.net>): A website that hosts a large updated and vetted list of Links to pirating websites. Sorted by category of media.

Help setting up devices:

Most devices are able to connect to any screen as long as you have the proper cable to connect them.

You can search on google or youtube for how to connect your specific devices.

Below are common cable inputs. If you are going from one input to another, you may need to attach an adapter to your cable.

Phone Tools:

*Firefox to get access to Ublock origin & stream without ads. Navigate to pirate site and enjoy once AdBlocker enabled

*Download ALL of Wikipedia for 28gb.

*MicroSD card to raise storage

*Power bank for extra battery life

/more advanced/

*PDF viewers and eReaders to read aloud downloaded books that do not come with audio.

*Emulator to play handheld and console games on your phone.

VPN

Recommended for downloading or torrenting, but not necessary for just streaming content. VPNs and AdBlockers can also be found on fmhy.net

AdBlocker

PLEASE USE AN ADBLOCKER! Ublock origin is free and recommended. Removes shady pop-up ads and redirects.

Devices you can pirate with:

Phone - See Last Page

Console - Access Web Browser then navigate to Pirate site

Laptop/computer - Navigate to pirate site

Tablet - Navigate to pirate site

Streaming box - Find or install a browser. Solutions vary in complexity

Smart TV- Browser exists but in a limited version and may not work. Recommended to use as a regular TV if the browser slow.
